Training Overview

This intensive 2-day workshop provides a comprehensive introduction to data privacy regulations, compliance frameworks, and practical implementation strategies. Designed for privacy officers, compliance managers, and IT professionals responsible for data protection, this training focuses on hands-on exercises and real-world scenarios to build a robust data privacy program that meets global regulatory requirements.

Next Session

- Dates: September 15-16, 2026
- Times: 9:00 AM - 5:00 PM each day
- Format: Available in-person or live virtual
- Prerequisites: Basic understanding of data handling processes
- Price: \$1,195 per participant (includes materials, lunch for in-person attendees, and 30-day follow-up support)

Training Curriculum

Day 1: Privacy Regulations and Assessment Methodologies

Morning Session: Global Privacy Regulatory Landscape - Major privacy regulations overview (GDPR, CCPA/CPRA, HIPAA, PIPEDA) - Key principles of data protection legislation - Territorial scope and applicability - Individual rights and organizational obligations - Hands-on exercise: Conducting a regulatory applicability assessment

Afternoon Session: Privacy Impact Assessment and Data Mapping - Data inventory and classification methodologies - Conducting effective data flow mapping - Privacy Impact Assessment (PIA) frameworks - Data Protection Impact Assessment (DPIA) requirements - Hands-on exercise: Developing a PIA for a sample business process

Day 2: Compliance Implementation and Risk Management

Morning Session: Operationalizing Privacy Compliance - Designing a privacy governance structure - Implementing privacy by design principles - Developing compliant consent mechanisms - Data subject rights management systems - Hands-on exercise: Creating a data subject request handling procedure

Afternoon Session: Vendor Management and Breach Response - Third-party risk assessment frameworks - Data processing agreements and contractual safeguards - Data breach identification and classification - Notification requirements and timelines - Hands-on exercise: Tabletop data breach simulation

Learning Outcomes

By completing this training, participants will be able to:

- Identify applicable privacy regulations for their organization
- Conduct comprehensive data mapping and classification
- Implement privacy impact assessment methodologies
- Develop effective privacy policies and procedures
- Establish data subject rights fulfillment processes
- Create incident response plans for data breaches
- Design third-party risk management frameworks

Training Methods

Who Should Attend

This training is ideal for:

- Privacy officers and data protection officers
- Compliance managers and specialists
- IT security professionals responsible for data protection
- Legal professionals advising on privacy matters
- Risk management professionals
- Information governance specialists
- Business managers handling personal data

Basic understanding of organizational data handling processes is beneficial, but no specific privacy expertise is required.

Materials and Resources

Participants will receive:

- Comprehensive digital training manual
- Privacy regulation comparison charts
- Assessment templates and checklists

- 
- Sample privacy policies and procedures
 - Data breach response toolkit
 - Certificate of completion
 - 30 days of post-training email support
 - Access to recorded sessions for reference

Instructor

This training is delivered by the CHENIST Team – experienced practitioners who combine deep technical expertise with practical, real-world teaching. Our trainers work on live engagements and bring current industry knowledge directly into the classroom.
